ONE-PAGE PROTOTYPE PORTFOLIO

AI Teaching Workflow Prototype

A teacher-side MVP that turns live IELTS lesson notes into personalized student review loops with AI drafting, 5D quality control, teacher confirmation, and assistant follow-up.

Jack Yan

Frontline IELTS teacher in China

1,400+ teaching hours

IELTS 7.5 / L9.0 / W8.0

Remote / contractor exploration

WHAT I BUILT

A small-sample AI education workflow that helps tutors convert real lesson content into personalized review material while keeping tutor judgment central.

Boundary: This is a minimal MVP / prototype, not a production launch, large-scale rollout, or proven score-improvement study.

PROTOTYPE FLOW

1. **Teacher lesson notes**
   Student, subject, class focus, homework, vocabulary, corrections.
2. **AI review generation**
   Review cards, weak points, next actions, assistant checks.
3. **5D quality check**
   Faithfulness, specificity, student fit, action clarity, risk flags.
4. **Teacher confirmation**
   Accept, revise, or reject before student-facing delivery.
5. **Student + TA loop**
   Student review page and assistant follow-up view.

VALIDATED SO FAR

- Completed a minimal MVP experiment.
- Ran AI generation, quality check, database write-in, student page, and assistant view.
- Used an initial N=3 IELTS sample pool across reading, listening, and writing.
- Collected early teacher / student / assistant qualitative feedback.
- Kept long-term retention and score improvement outside current claims.

WHAT IT PROVES

- Frontline understanding of language-learning follow-up pain points.
- Ability to design human-in-the-loop AI education workflows.
- Awareness of AI output quality, hallucination risk, and teacher review cost.
- Product thinking around early-stage pilot metrics instead of vanity growth metrics.
- Low-code / AI tool execution and demo packaging ability.

PILOT METRICS I WOULD TRACK FIRST

AI draft acceptance
Is the first draft useful enough for teachers?

Teacher review time
Does the workflow reduce after-class preparation cost?

Quality warning rate
How often do hallucination or vague-advice risks appear?

Student Day-1 open
Do students actually access the personalized review page?

Assistant clarity
Can support staff see what to check after class?

Write-in reliability
Can the learning output be stored as reusable data?

WHY THIS MAY FIT PREPLY

Nearby problem space: AI-powered tools for tutors, personalized live language learning, and learner progress loops.

My prototype is not a Preply clone. It is a teacher-side workflow experiment that may be useful for thinking about tutor productivity, personalized lesson follow-up, AI-generated learning content quality, and early pilot metrics.

COLLABORATION ANGLE

I am exploring remote, contractor, or project-based AI education workflow work.

I can walk through the prototype in 10 minutes or complete a short case task around AI tutor workflows, content quality control, or learner follow-up loops. I can overlap with Europe morning hours from China.
